# What is a Report Template?

- Report Templates are Pre-established “Forms” for each type of Mishap that must be submitted on a recurring basis, e.g. Motor Vehicle mishaps.
- Allows a user to create a report that can be re-used with the default data populated and stored in the template.
- Creating a report from a template limits data entry to those data elements that are unique to the event.
- Why Use a Template? Templates enhance and simplify the reporting process by reducing the time necessary to enter an event, by eliminating the entry of repetitive data.
- Templates may be established for any reason the user desires
  - Reports may be set up by mishap type, activity involved, location, etc.

# Uses for a Report Template

- Report Templates can be used for routinely reported mishaps, such as injuries to individual workers.
- All UIC/RUC/MCC information can be entered in the template.
- Point of Contact name, phone number, etc. can be entered.
- Even a completed report can be saved as a template before that report is sent if you anticipate having to send a similar report in the future.
- Make sure that when using a template new information is entered and old information is changed.
- Remember - your template is limited to the logic - if you answer questions differently you may get offered more or different questions.

# Creating a Template

After Login, the first WESS User Environment screen is displayed.
